

Atlas V payload shroud – 1:96 Curiosity Mars Science Lab

Copyright 2011; John Jogerst.

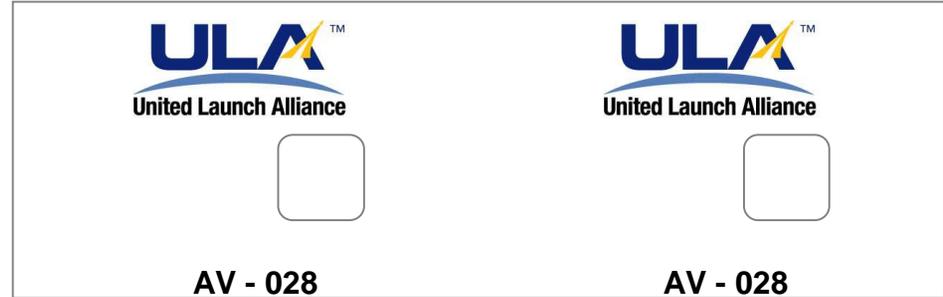

Curiosity launched on an Atlas V-541 with four solid rocket boosters and the short, 68-foot payload fairing. To build this variant use the overlays to change the booster serial number to AV-028 and the revised graphics for the constant upper & lower sections of the fairing. The Rover is available at http://jleslie48.com/gallery_models_postapollo.html#m80.

AV - 028

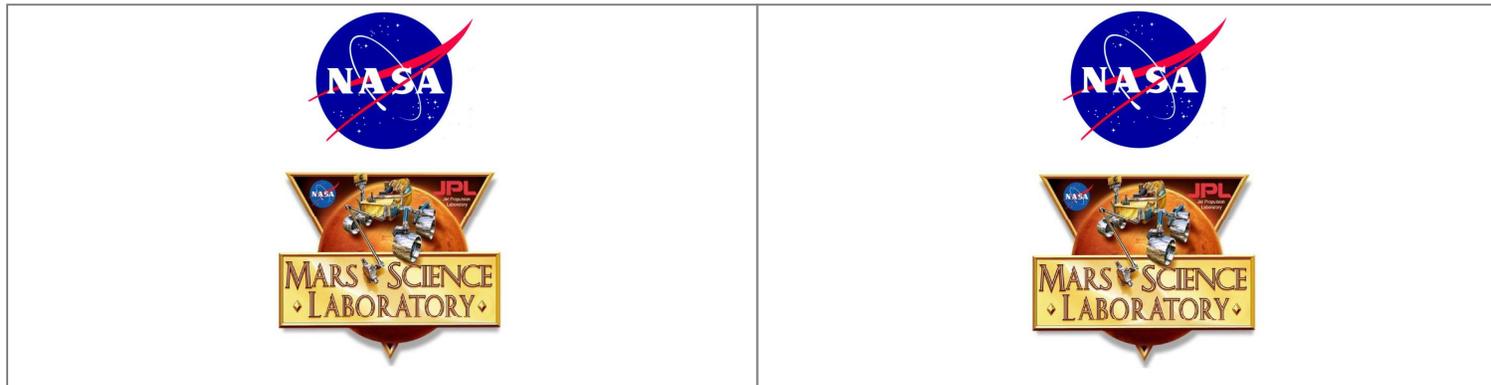

Cut out and glue over numbers on base of main booster

AV - 028

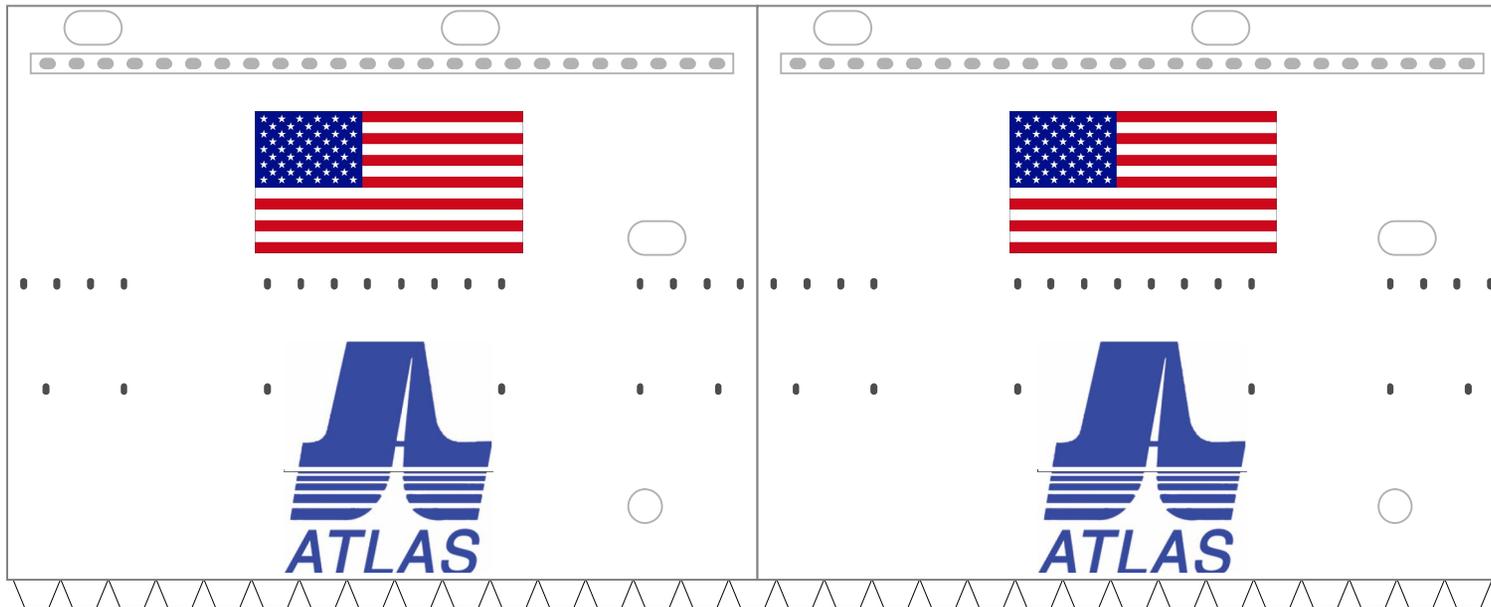

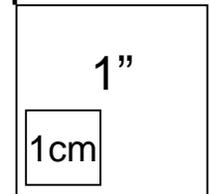

Revised interstage body

PRINT ON CARDSTOCK

Constant section Upper

Constant section Lower

Bend bottom tabs in to slip section into the top of the boattail. Glue in place.
